

CARING FOR YOUR FLAG

Your Flags Unlimited flag should last approximately three to six months under normal conditions. Your flag could be exposed to rain, snow, ice, high winds and bright sunlight.

To increase its longevity:

- Take it down in severe weather.
- If possible, take it down at night regardless of weather.
- Store completely dry.
- Trim or re-hem frayed ends as soon as they are noticed.
- Do not fly it from where it could be caught or obstructed (i.e. trees or poles with rough surfaces).

As per above, unfortunately, we can't guarantee the longevity of a flag because we can't guarantee the conditions it flies in. If, however, your flag lasted about three to six months, then it has met with expectations.
